About us

EU AI Act: Interactive Map of Obligations and Risk Categories

The EU AI Act represents a relevant regulatory milestone as the first comprehensive legislation on Artificial Intelligence, with global repercussions it. The result: a network of concise, visual and interactive infographics, which clearly and simply address the most relevant issues of the new standard: the framework as an AI operator, its obligations, categorization of degrees of risk and essential legal definitions.

In line with our commitment to promoting legal innovation, with a few simple clicks you can navigate through interconnected infographics that transform the challenge of understanding the law into a less complex, fluid and intuitive experience.

Legal framework for AI in Brazil: AI Legal Framework approved in the Senate

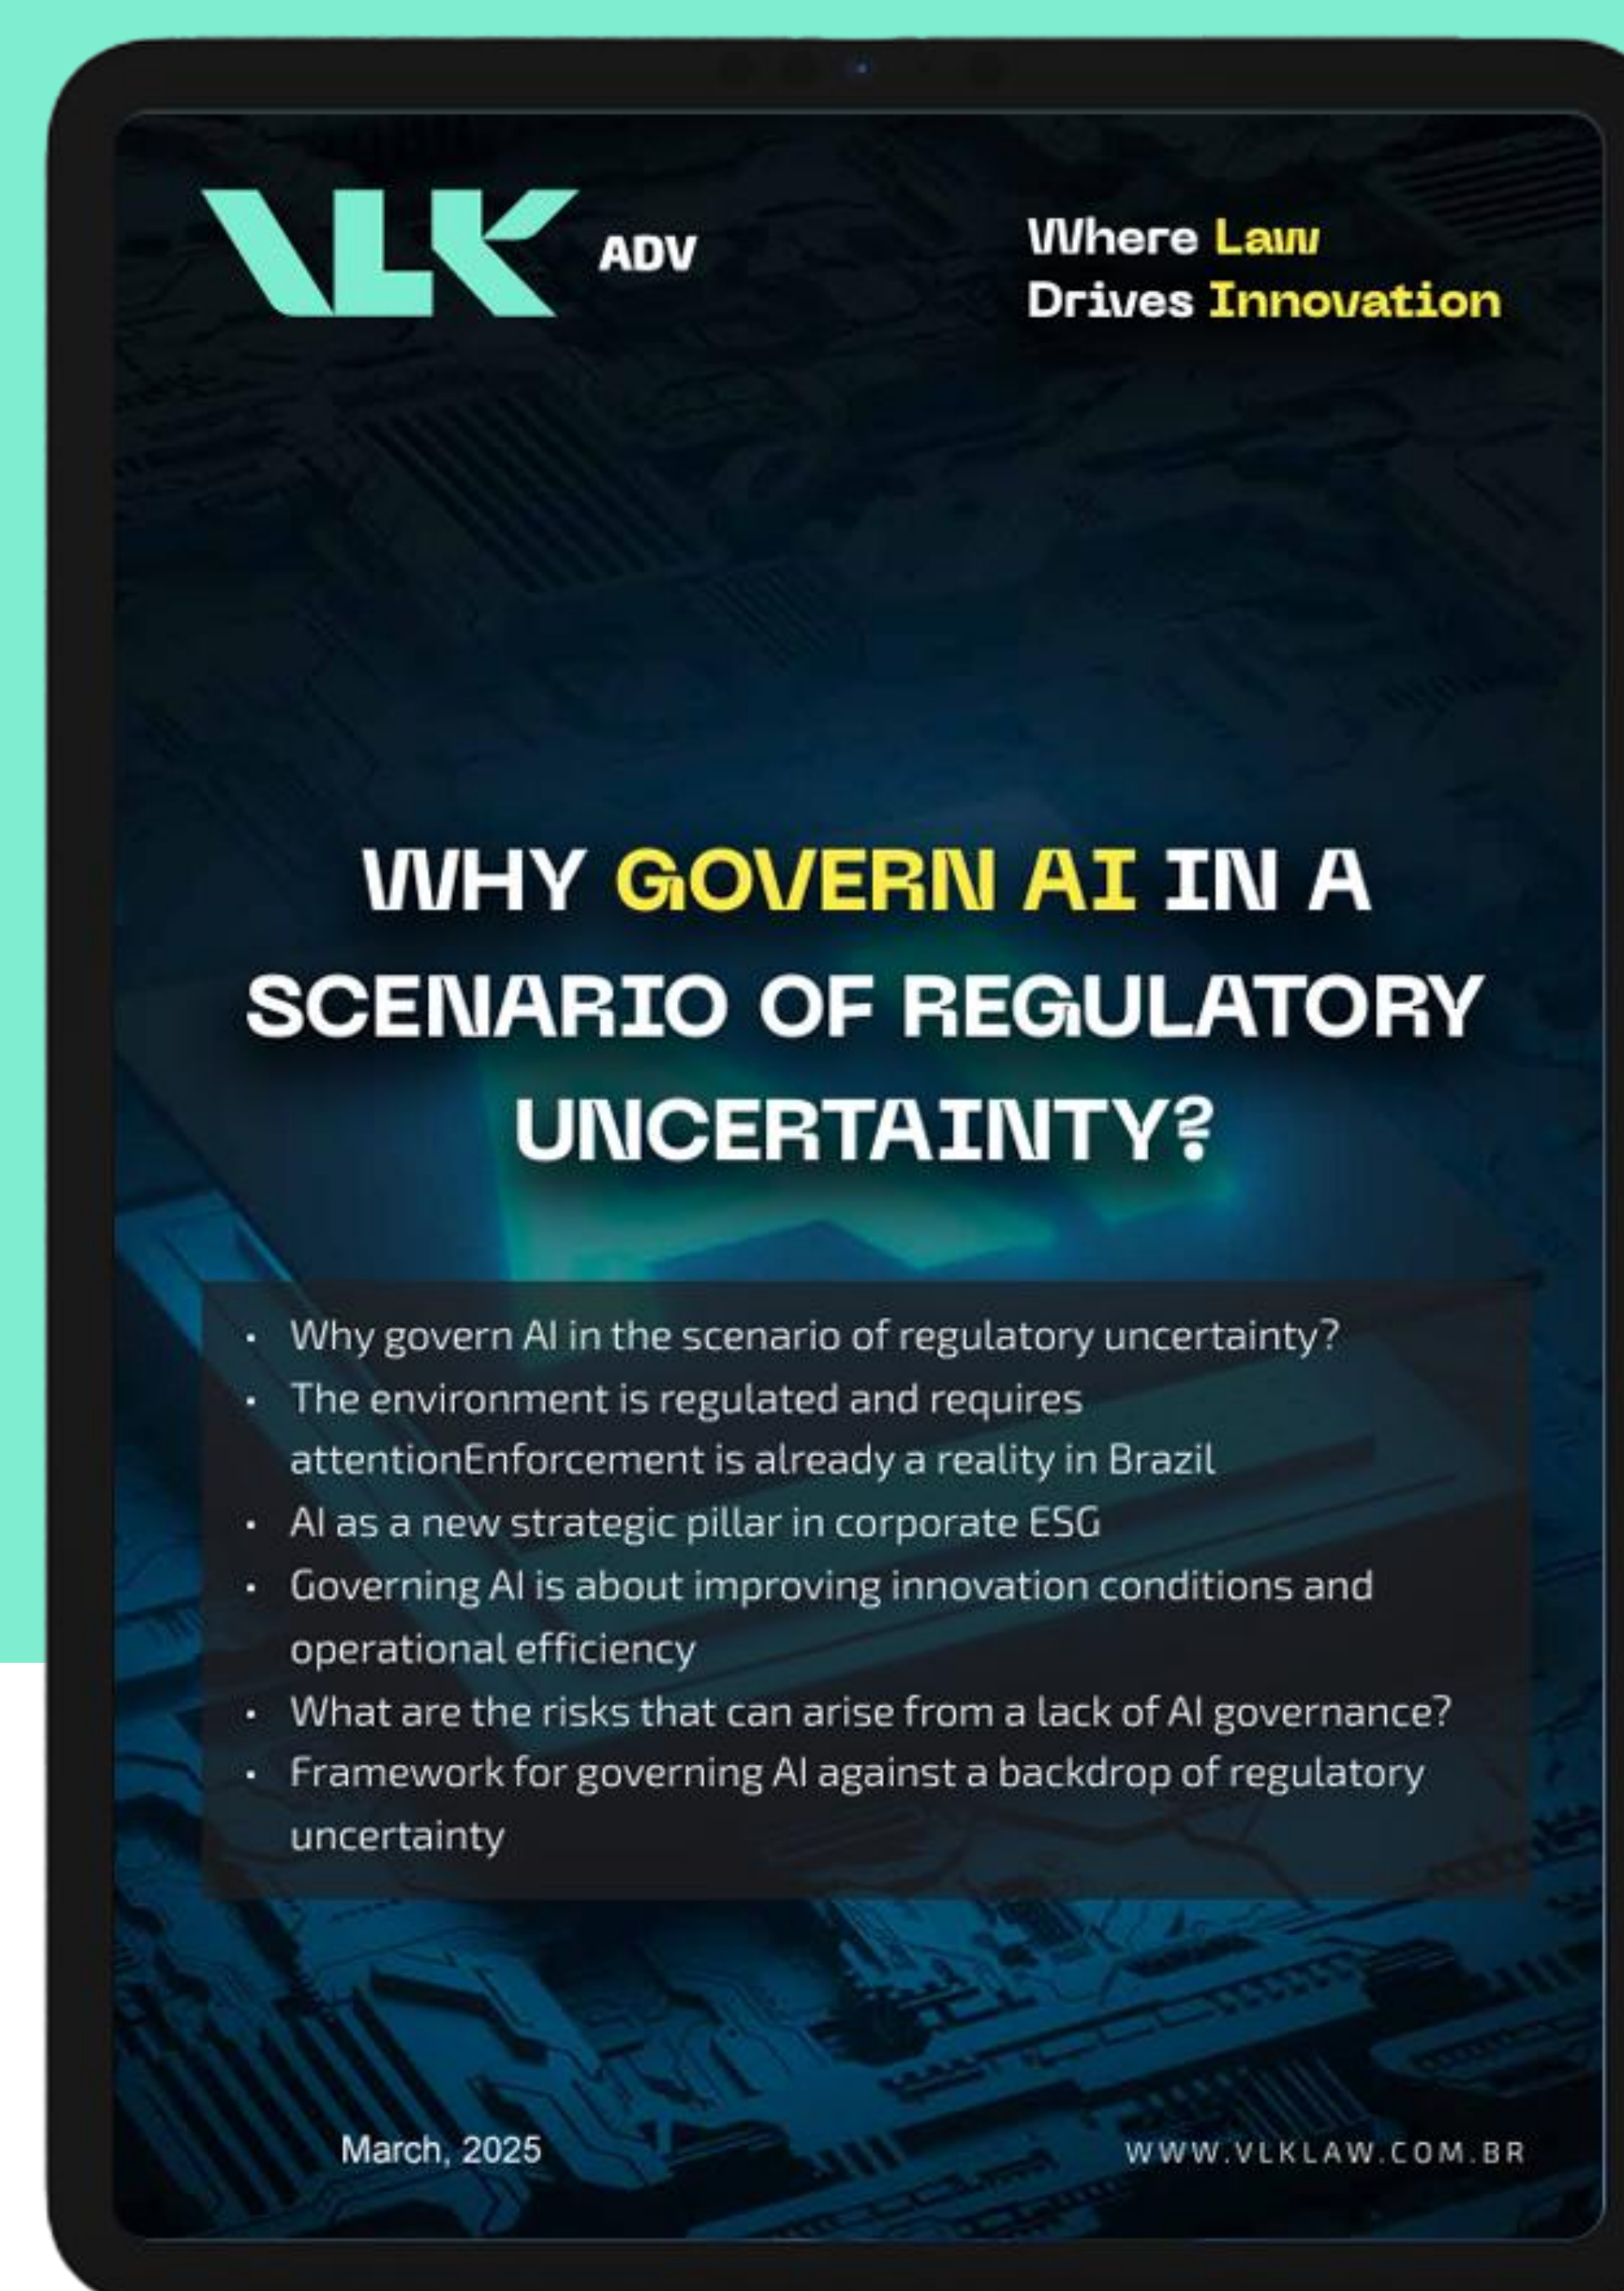

The Senate's Temporary AI Commission (CTIA) presented a new version of the substitute for Bill 2338/23, the proposed regulatory framework for Artificial Intelligence in Brazil. Incorporating contributions from various sectors, the revised text reflects progress toward balancing technological innovation, rights protection, and flexible regulation, though some points of contention remain.

See the analysis prepared by our experts on the key changes and highlights of this new text, along with an updated timeline of the legislative process in Brazil.

Why govern AI in the scenario of regulatory uncertainty?

Artificial Intelligence (AI) governance transcends simple legal compliance, positioning itself as a strategic advantage for companies that want to lead in a dynamic and ever-changing regulatory environment. In addition, robust governance promotes operational efficiency, facilitates innovation by ensuring that the business strategy is aligned with the ethical and responsible use of technology, and strengthens the trust of customers and business partners, consolidating the company's reputation in the market. Although Brazil does not yet have specific legislation for AI, the current legal scenario already imposes requirements and guidelines that directly impact business operations.

We have carefully prepared this e-book on Digital Law trends for 2025, exploring the most impactful topics for companies seeking to consolidate their competitiveness in a global, innovative and challenging market.

The future of privacy: How to be prepared for

Celebrated on January 28, International Privacy Day reinforces the relevance of personal data protection in a global scenario shaped by emerging technologies, in which the constant flow of information challenges companies and organizations to maintain high standards of governance.

To mark this date, VLK Advogados has prepared a strategic guide outlining essential measures for data management in compliance with the latest legal and ethical requirements. The material covers detailed guidance on governance measures for the development and application of artificial intelligence systems in an ethical and transparent manner, the role and responsibilities of the Data Protection Officer (DPO), requirements to ensure legality in the international transfer of personal data, and advanced strategies for cybersecurity. This booklet aims not only to strengthen the rights of data subjects, but also to align corporate practices with the growing demand for trust, legal certainty, accountability, and responsible innovation in an increasingly dynamic and constantly evolving digital environment.
